

SAP Common Issues and Solutions

Issue #1: Return Order Error (SAP SD)

Problem Statement:

User reported issue with 'return order error' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'return order error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Return Order Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #2: Info Record Not Found (SAP MM)

Problem Statement:

User reported issue with 'info record not found' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'info record not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'Info Record Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #3: Asset Not Capitalized (SAP FICO)

Problem Statement:

User reported issue with 'asset not capitalized' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'asset not capitalized'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'Asset Not Capitalized' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #4: Function Module Dump (SAP ABAP)

Problem Statement:

User reported issue with 'function module dump' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'function module dump'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Function Module Dump' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #5: RFC Connection Failed (SAP BASIS)

Problem Statement:

User reported issue with 'rfc connection failed' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'rfc connection failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'RFC Connection Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #6: Routing Not Found (SAP PP)

Problem Statement:

User reported issue with 'routing not found' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'routing not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'Routing Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #7: TO Not Created (SAP WM)

Problem Statement:

User reported issue with 'to not created' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'to not created'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'TO Not Created' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #8: ESS Access Denied (SAP HCM)

Problem Statement:

User reported issue with 'ess access denied' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'ess access denied'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'ESS Access Denied' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #9: Settlement Rule Missing (SAP PM)

Problem Statement:

User reported issue with 'settlement rule missing' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'settlement rule missing'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Settlement Rule Missing' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #10: Inspection Lot Not Created (SAP QM)

Problem Statement:

User reported issue with 'inspection lot not created' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'inspection lot not created'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Inspection Lot Not Created' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #11: Missing Pricing Condition (SAP SD)

Problem Statement:

User reported issue with 'missing pricing condition' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'missing pricing condition'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Missing Pricing Condition' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #12: GR Not Possible (SAP MM)

Problem Statement:

User reported issue with 'gr not possible' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'gr not possible'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'GR Not Possible' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #13: GL Not Found (SAP FICO)

Problem Statement:

User reported issue with 'gl not found' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'gl not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'GL Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #14: Smartform Not Triggered (SAP ABAP)

Problem Statement:

User reported issue with 'smartform not triggered' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'smartform not triggered'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Smartform Not Triggered' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #15: Transport Request Stuck (SAP BASIS)

Problem Statement:

User reported issue with 'transport request stuck' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'transport request stuck'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'Transport Request Stuck' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #16: Routing Not Found (SAP PP)

Problem Statement:

User reported issue with 'routing not found' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'routing not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'Routing Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #17: Picking List Missing (SAP WM)

Problem Statement:

User reported issue with 'picking list missing' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'picking list missing'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'Picking List Missing' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #18: ESS Access Denied (SAP HCM)

Problem Statement:

User reported issue with 'ess access denied' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'ess access denied'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'ESS Access Denied' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #19: Settlement Rule Missing (SAP PM)

Problem Statement:

User reported issue with 'settlement rule missing' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'settlement rule missing'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Settlement Rule Missing' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #20: Certificate Profile Error (SAP QM)

Problem Statement:

User reported issue with 'certificate profile error' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'certificate profile error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Certificate Profile Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #21: Credit Limit Check Failed (SAP SD)

Problem Statement:

User reported issue with 'credit limit check failed' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'credit limit check failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Credit Limit Check Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #22: PO Approval Workflow Stuck (SAP MM)

Problem Statement:

User reported issue with 'po approval workflow stuck' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'po approval workflow stuck'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'PO Approval Workflow Stuck' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #23: Tax Code Invalid (SAP FICO)

Problem Statement:

User reported issue with 'tax code invalid' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'tax code invalid'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'Tax Code Invalid' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #24: ALV Grid Not Displaying (SAP ABAP)

Problem Statement:

User reported issue with 'alv grid not displaying' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'alv grid not displaying'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'ALV Grid Not Displaying' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #25: TP Import Error (SAP BASIS)

Problem Statement:

User reported issue with 'tp import error' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'tp import error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'TP Import Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #26: MRP Run Failed (SAP PP)

Problem Statement:

User reported issue with 'mrp run failed' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'mrp run failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'MRP Run Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #27: WM-IM Mismatch (SAP WM)

Problem Statement:

User reported issue with 'wm-im mismatch' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'wm-im mismatch'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'WM-IM Mismatch' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #28: PA Master Data Incomplete (SAP HCM)

Problem Statement:

User reported issue with 'pa master data incomplete' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'pa master data incomplete'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'PA Master Data Incomplete' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #29: Task List Not Found (SAP PM)

Problem Statement:

User reported issue with 'task list not found' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'task list not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Task List Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #30: Sampling Procedure Not Found (SAP QM)

Problem Statement:

User reported issue with 'sampling procedure not found' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'sampling procedure not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Sampling Procedure Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #31: Customer Master Incomplete (SAP SD)

Problem Statement:

User reported issue with 'customer master incomplete' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'customer master incomplete'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Customer Master Incomplete' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #32: Automatic PO Not Triggered (SAP MM)

Problem Statement:

User reported issue with 'automatic po not triggered' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'automatic po not triggered'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'Automatic PO Not Triggered' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #33: GL Not Found (SAP FICO)

Problem Statement:

User reported issue with 'gl not found' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'gl not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'GL Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #34: Smartform Not Triggered (SAP ABAP)

Problem Statement:

User reported issue with 'smartform not triggered' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'smartform not triggered'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Smartform Not Triggered' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #35: License Expired (SAP BASIS)

Problem Statement:

User reported issue with 'license expired' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'license expired'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'License Expired' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #36: MRP Run Failed (SAP PP)

Problem Statement:

User reported issue with 'mrp run failed' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'mrp run failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'MRP Run Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #37: Stock Discrepancy (SAP WM)

Problem Statement:

User reported issue with 'stock discrepancy' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'stock discrepancy'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'Stock Discrepancy' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #38: Time Evaluation Error (SAP HCM)

Problem Statement:

User reported issue with 'time evaluation error' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'time evaluation error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'Time Evaluation Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #39: Counter Reading Incorrect (SAP PM)

Problem Statement:

User reported issue with 'counter reading incorrect' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'counter reading incorrect'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Counter Reading Incorrect' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #40: Quality Info Record Missing (SAP QM)

Problem Statement:

User reported issue with 'quality info record missing' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'quality info record missing'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Quality Info Record Missing' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #41: Credit Limit Check Failed (SAP SD)

Problem Statement:

User reported issue with 'credit limit check failed' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'credit limit check failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Credit Limit Check Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #42: Vendor Blocked (SAP MM)

Problem Statement:

User reported issue with 'vendor blocked' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'vendor blocked'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'Vendor Blocked' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #43: GL Not Found (SAP FICO)

Problem Statement:

User reported issue with 'gl not found' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'gl not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'GL Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #44: Program Syntax Error (SAP ABAP)

Problem Statement:

User reported issue with 'program syntax error' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'program syntax error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Program Syntax Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #45: License Expired (SAP BASIS)

Problem Statement:

User reported issue with 'license expired' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'license expired'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'License Expired' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #46: Capacity Not Considered (SAP PP)

Problem Statement:

User reported issue with 'capacity not considered' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'capacity not considered'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'Capacity Not Considered' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #47: Bin Not Found (SAP WM)

Problem Statement:

User reported issue with 'bin not found' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'bin not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'Bin Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #48: Infotype Error (SAP HCM)

Problem Statement:

User reported issue with 'infotype error' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'infotype error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'Infotype Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #49: Order Not Released (SAP PM)

Problem Statement:

User reported issue with 'order not released' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'order not released'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Order Not Released' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #50: MIC Not Assigned (SAP QM)

Problem Statement:

User reported issue with 'mic not assigned' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'mic not assigned'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'MIC Not Assigned' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #51: Credit Limit Check Failed (SAP SD)

Problem Statement:

User reported issue with 'credit limit check failed' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'credit limit check failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Credit Limit Check Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #52: Stock Not Updating in MMBE (SAP MM)

Problem Statement:

User reported issue with 'stock not updating in mmbe' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'stock not updating in mmbe'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'Stock Not Updating in MMBE' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #53: Document Splitting Failed (SAP FICO)

Problem Statement:

User reported issue with 'document splitting failed' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'document splitting failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'Document Splitting Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #54: Table Not Updated (SAP ABAP)

Problem Statement:

User reported issue with 'table not updated' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'table not updated'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Table Not Updated' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #55: TP Import Error (SAP BASIS)

Problem Statement:

User reported issue with 'tp import error' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'tp import error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'TP Import Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #56: Backflush Error (SAP PP)

Problem Statement:

User reported issue with 'backflush error' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'backflush error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'Backflush Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #57: WM-IM Mismatch (SAP WM)

Problem Statement:

User reported issue with 'wm-im mismatch' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'wm-im mismatch'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'WM-IM Mismatch' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #58: ESS Access Denied (SAP HCM)

Problem Statement:

User reported issue with 'ess access denied' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'ess access denied'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'ESS Access Denied' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #59: Task List Not Found (SAP PM)

Problem Statement:

User reported issue with 'task list not found' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'task list not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Task List Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #60: Quality Info Record Missing (SAP QM)

Problem Statement:

User reported issue with 'quality info record missing' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'quality info record missing'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Quality Info Record Missing' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #61: Credit Limit Check Failed (SAP SD)

Problem Statement:

User reported issue with 'credit limit check failed' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'credit limit check failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Credit Limit Check Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #62: PO Approval Workflow Stuck (SAP MM)

Problem Statement:

User reported issue with 'po approval workflow stuck' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'po approval workflow stuck'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'PO Approval Workflow Stuck' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #63: Exchange Rate Not Maintained (SAP FICO)

Problem Statement:

User reported issue with 'exchange rate not maintained' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'exchange rate not maintained'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'Exchange Rate Not Maintained' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #64: Program Syntax Error (SAP ABAP)

Problem Statement:

User reported issue with 'program syntax error' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'program syntax error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Program Syntax Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #65: Transport Request Stuck (SAP BASIS)

Problem Statement:

User reported issue with 'transport request stuck' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'transport request stuck'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'Transport Request Stuck' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #66: Order Confirmation Error (SAP PP)

Problem Statement:

User reported issue with 'order confirmation error' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'order confirmation error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'Order Confirmation Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #67: TO Not Created (SAP WM)

Problem Statement:

User reported issue with 'to not created' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'to not created'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'TO Not Created' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #68: PA Master Data Incomplete (SAP HCM)

Problem Statement:

User reported issue with 'pa master data incomplete' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'pa master data incomplete'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'PA Master Data Incomplete' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #69: Breakdown Notification Error (SAP PM)

Problem Statement:

User reported issue with 'breakdown notification error' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'breakdown notification error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Breakdown Notification Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #70: QM-PP Interface Error (SAP QM)

Problem Statement:

User reported issue with 'qm-pp interface error' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'qm-pp interface error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'QM-PP Interface Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #71: Credit Limit Check Failed (SAP SD)

Problem Statement:

User reported issue with 'credit limit check failed' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'credit limit check failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Credit Limit Check Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #72: Stock Not Updating in MMBE (SAP MM)

Problem Statement:

User reported issue with 'stock not updating in mmbe' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'stock not updating in mmbe'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'Stock Not Updating in MMBE' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #73: Document Splitting Failed (SAP FICO)

Problem Statement:

User reported issue with 'document splitting failed' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'document splitting failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'Document Splitting Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #74: Short Dump in Custom Report (SAP ABAP)

Problem Statement:

User reported issue with 'short dump in custom report' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'short dump in custom report'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Short Dump in Custom Report' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #75: License Expired (SAP BASIS)

Problem Statement:

User reported issue with 'license expired' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'license expired'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'License Expired' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #76: MRP Run Failed (SAP PP)

Problem Statement:

User reported issue with 'mrp run failed' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'mrp run failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'MRP Run Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #77: Stock Discrepancy (SAP WM)

Problem Statement:

User reported issue with 'stock discrepancy' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'stock discrepancy'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'Stock Discrepancy' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #78: ESS Access Denied (SAP HCM)

Problem Statement:

User reported issue with 'ess access denied' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'ess access denied'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'ESS Access Denied' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #79: Equipment Not Updated (SAP PM)

Problem Statement:

User reported issue with 'equipment not updated' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'equipment not updated'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Equipment Not Updated' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #80: Quality Info Record Missing (SAP QM)

Problem Statement:

User reported issue with 'quality info record missing' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'quality info record missing'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Quality Info Record Missing' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #81: Delivery Block in Sales Order (SAP SD)

Problem Statement:

User reported issue with 'delivery block in sales order' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'delivery block in sales order'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Delivery Block in Sales Order' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #82: GR Not Possible (SAP MM)

Problem Statement:

User reported issue with 'gr not possible' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'gr not possible'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'GR Not Possible' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #83: Exchange Rate Not Maintained (SAP FICO)

Problem Statement:

User reported issue with 'exchange rate not maintained' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'exchange rate not maintained'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'Exchange Rate Not Maintained' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #84: ALV Grid Not Displaying (SAP ABAP)

Problem Statement:

User reported issue with 'alv grid not displaying' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'alv grid not displaying'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'ALV Grid Not Displaying' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #85: License Expired (SAP BASIS)

Problem Statement:

User reported issue with 'license expired' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'license expired'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'License Expired' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #86: Backflush Error (SAP PP)

Problem Statement:

User reported issue with 'backflush error' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'backflush error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'Backflush Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #87: WM-IM Mismatch (SAP WM)

Problem Statement:

User reported issue with 'wm-im mismatch' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'wm-im mismatch'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'WM-IM Mismatch' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #88: Leave Quota Not Updated (SAP HCM)

Problem Statement:

User reported issue with 'leave quota not updated' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'leave quota not updated'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'Leave Quota Not Updated' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #89: Counter Reading Incorrect (SAP PM)

Problem Statement:

User reported issue with 'counter reading incorrect' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'counter reading incorrect'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Counter Reading Incorrect' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #90: Certificate Profile Error (SAP QM)

Problem Statement:

User reported issue with 'certificate profile error' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'certificate profile error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Certificate Profile Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #91: Output Not Triggered for Invoice (SAP SD)

Problem Statement:

User reported issue with 'output not triggered for invoice' in SAP SD during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP SD related to 'output not triggered for invoice'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP SD.
2. Review the configuration settings or master data linked to the 'Output Not Triggered for Invoice' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #92: PO Approval Workflow Stuck (SAP MM)

Problem Statement:

User reported issue with 'po approval workflow stuck' in SAP MM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP MM related to 'po approval workflow stuck'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP MM.
2. Review the configuration settings or master data linked to the 'PO Approval Workflow Stuck' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #93: GL Not Found (SAP FICO)

Problem Statement:

User reported issue with 'gl not found' in SAP FICO during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP FICO related to 'gl not found'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP FICO.
2. Review the configuration settings or master data linked to the 'GL Not Found' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #94: Program Syntax Error (SAP ABAP)

Problem Statement:

User reported issue with 'program syntax error' in SAP ABAP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP ABAP related to 'program syntax error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP ABAP.
2. Review the configuration settings or master data linked to the 'Program Syntax Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #95: RFC Connection Failed (SAP BASIS)

Problem Statement:

User reported issue with 'rfc connection failed' in SAP BASIS during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP BASIS related to 'rfc connection failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP BASIS.
2. Review the configuration settings or master data linked to the 'RFC Connection Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #96: Production Version Missing (SAP PP)

Problem Statement:

User reported issue with 'production version missing' in SAP PP during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PP related to 'production version missing'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PP.
2. Review the configuration settings or master data linked to the 'Production Version Missing' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #97: Putaway Strategy Error (SAP WM)

Problem Statement:

User reported issue with 'putaway strategy error' in SAP WM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP WM related to 'putaway strategy error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP WM.
2. Review the configuration settings or master data linked to the 'Putaway Strategy Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #98: Infotype Error (SAP HCM)

Problem Statement:

User reported issue with 'infotype error' in SAP HCM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP HCM related to 'infotype error'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP HCM.
2. Review the configuration settings or master data linked to the 'Infotype Error' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #99: Maintenance Plan Not Triggering (SAP PM)

Problem Statement:

User reported issue with 'maintenance plan not triggering' in SAP PM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP PM related to 'maintenance plan not triggering'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP PM.
2. Review the configuration settings or master data linked to the 'Maintenance Plan Not Triggering' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.

SAP Common Issues and Solutions

Issue #100: Batch Determination Failed (SAP QM)

Problem Statement:

User reported issue with 'batch determination failed' in SAP QM during normal transaction processing.

Root Cause:

The issue occurs due to a missing or incorrect configuration in SAP QM related to 'batch determination failed'. This often results from user input errors or overlooked master data settings.

Solution:

1. Go to the relevant transaction or IMG path in SAP QM.
2. Review the configuration settings or master data linked to the 'Batch Determination Failed' issue.
3. Correct the settings, ensure relevant fields are populated, and test the scenario.
4. Document the fix and inform the user or functional team.
